The Effectiveness of Rhythmic Movement Games on Attention in Children with Mental Retardation

Original Research, A2

Taghi Pour Javan A, Faramarzi S, Hassan nattaj F and Sabetimani M.

ABSTRACT: Children afflicted by intellectual disabilities are the neediest groups deserving to receive such services as games. The purpose of this research was to investigate the effect of rhythmical movement games in improving the attention of children with mental retardation. The sample of the study included 30 children suffering from mental retardation who were randomly divided into two groups of experimental and control. The experimental group was taught rhythmical movement games while the control group was not taught. The obtained findings show that rhythmical movement games have a significant effect on improving the attention of children with mental retardation.

Key words: attention, mental retardation, rhythmic game.

Studying the Relationship between Teaching Models and Research-based Thinking Development

Original Research, A3

**Relationship between the academic self-efficacy and creativity with the critical thinking in the university students**

**Original Research, A5**

Shaabani F, Maktabi G, Shehni Yeylagh M and Morovati Z.

**ABSTRACT:**

The purpose of the present study was to examine the relationship between academic self-efficacy and creativity with the critical thinking in the undergraduate students. The study had a descriptive-analytical design and included 220 students from Isfahan University. In the multiple regression analysis, four variables of academic self-efficacy, creativity, critical thinking, and flexibility were included, and the results revealed that these variables predicted critical thinking. Education, intellectual flexibility, fluency, elaboration, and academic self-efficacy played a major role in predicting critical thinking.

**Key words:**
creativity, academic self-efficacy, critical thinking
