Confidence-Building and Parameters of Trust in Police

Saedi A.M. and Ghasemnejad K.

ABSTRACT: The current study deals with the ways of confidence-building versus police and determines indices of trust in police. These indices are perceived police authority, positive interaction between police and society, cooperation between police and society, moral police, of police, and hope for the future. The results indicate that trust in police begins with the quality of the police and their response to citizens, as well as the way they perform their duties. The analysis of the indices of trust in police shows that the police can rely on the citizens and vice versa. The results also indicate that the police are not satisfied with their duties and are not satisfied with the citizens. This is due to the lack of communication and cooperation between the police and society.

Keywords: Trust Index, Police, Societal Participation, Sense of Security
This study is intended to explore the relationship among organizational culture and occupational burnout in personnel of TVTO organization. The results suggest that occupational burnout is higher in male personnel compared to female employees.
