Relationship between emotional intelligence and leadership style in middle manager

Original Research, C1

Khorshidi A, Tarkhan F. and Naghsh Z.

ABSTRACT: This article investigates the relationship of emotional intelligence and leadership style in middle managers. The study aims to explore how emotional intelligence influences different leadership styles. The findings indicate that transformational style is explained by empathy; and pragmatic style is explained by self-awareness and empathy. Keywords: Emotional Intelligence, leadership style, Middle manager
ABSTRACT: Today the subject of internationalization of higher education curricula across the world has been accompanied with the issues such as rapid changes, cultural diversity, and globalization. This paper aims to present a comparative study of the internationalization activities and methods of teaching and learning in countries like the United States, America, Finland, and Japan.

Keywords: Internationalization, Higher Education, curriculum educational systems, comparative study
ABSTRACT:

Adolescents egocentrism is a controversial concept in cognitive developmental theories and there are little studies that investigated their egocentrism and role of family communication dimensions, Separation-Individuation and Imaginary Audience in explaining the egocentrism in Iranian adolescents. This study was designed to examine the role of family communication dimensions, Separation-Individuation and Imaginary Audience in Iranian adolescents. The explanatory model was elaborated in the article.

Keywords: Conversation, Conformity, Separation-Individuation.
Evaluation of Relationship between Personality Traits and General Health of High School Students

ABSTRACT: The current research has been performed due to evaluation of ties of personality traits and general health. 205 students participated in this study. 

The research hypotheses are as follows: There is a positive relationship between neuroticism and general health, there is no relationship between extraversion and general health, there is a positive relationship between openness and general health, there is a negative relationship between agreeableness and general health, there is a positive relationship between conscientiousness and general health. The result shows that there is a negative relationship (p < 0.05) between Neuroticism and general health of students. Neuroticism predicts 0.452% of variance of general health.

Network Policy Making: A Necessity for Today’s Organizations

Original Research, C5

Kamel M. Alvani S.M. and Mohammadi Moghadam Y.

ABSTRACT: The highly changeable and inconstant condition of organizational environments, including public and private sectors, requires the need to have more flexible and adaptive management processes. The network policy making is a necessity for today’s organizations in providing flexibility and adaptability. This study introduced some necessary conditions in order to successfully design and implement a network policy framework. It also performed a comprehensive case analysis of the application of network policy framework in an organization. Finally, it provided theoretical and applied suggestions in order to prepare organizations for progressing in this direction.

Keywords: Policy making, Decision making, Network structure.
