Evaluation of Relationship between Personality Traits and General Health of High School Students

Original Research, C4

Zarei, E. Zeinalipour H. Tayebi sough M. Adli M. and Tayebi sough A.

ABSTRACT: The current research has been performed due to evaluation of ties of personality traits and general health. 205 students were considered in this research. Results show that there is a significant negative relationship (p < 0.05) between Neuroticism and general health of students. Neuroticism predicts 0.452% of variance of general health.

Keywords: Personality Traits, General Health, Female Students
ABSTRACT: The highly changeable and inconstant condition of organizational environments, including public and private sectors, have led to the growth of network policy making. This paper presents an analysis of the necessity and relevance of network policy making for today’s organizations. It includes empirical evidence and theoretical discussion to identify the determinants of network policy making and its role in the decision-making process. Finally, it provides theoretical and applied suggestions to prepare organizations for progressing in this direction.
