Evaluation of Relationship between Personality Traits and General Health of High School Students

Zarei, E. Zeinalipour H. Tayebi sough M. Adli M. and Tayebi sough A.

ABSTRACT: The current research has been performed due to evaluation of ties of personality traits and general health. 205 students were selected from high school students in Bandar Abbas. The relationship between personality traits of extraversion, openness (flexibility), agreeableness, conscientiousness and general health of students was examined. The results showed that there is a negative relationship (p < 0.05) between Neuroticism and general health of students. Neuroticism predicts 0.452% of variance of general health.

Network Policy Making: A Necessity for Today’s Organizations

Original Research, C5

Kamel M. Alvani S.M. and Mohammadi Moghadam Y.

ABSTRACT: The highly changeable and inconstant condition of organizational environments, including public and private sectors, has led to the necessity of network policy making which is done by considering the various factors on the relative knowledge of the environment. In this paper, we examine the aspects of the network structure and the policies and regulations in order to facilitate the decision-making process for the organizations in this direction. We also present a theoretical approach to develop a network management system, and finally provided theoretical and applied suggestions in order to prepare organizations for progressing in this direction.
