Evaluation of Relationship between Personality Traits and General Health of High School Students

Original Research, C4

Zarei, E. Zeinalipour H. Tayebi sough M. Adli M. and Tayebi sough A.

ABSTRACT: The current research has been performed due to evaluation of ties of personality traits and general health. 205 students were randomly selected in which personality traits were measured using the Minnesota Multiphasic Personality Inventory (MMPI) and general health was determined using the General Health Questionnaire (GHQ). The results of the study showed that there is a positive relationship between extraversion and general health (p < 0.01) and there is a negative relationship (p < 0.05) between Neuroticism and general health of students. Neuroticism predicts 0.452% of variance of general health.

Network Policy Making: A Necessity for Today’s Organizations

Original Research, C5

Kamel M. Alvani S.M. and Mohammadi Moghadam Y.

ABSTRACT: The highly changeable and inconstant condition of organizational environments, including public and private sectors, has led to the need for a new approach to policy making. This approach is based on the idea of network structures and network management to provide a mechanism for efficiently solving problems in organizational environments. This paper explores the concept of network policy making and its application to organizations. It provides a theoretical framework for network policy making, and discusses the implications of this approach for decision making in organizations. The study concludes by suggesting practical applications of network policy making in various sectors.
