Evaluation of Relationship between Personality Traits and General Health of High School Students

Original Research, C4

Zarei, E. Zeinalipour H. Tayebi sough M. Adli M. and Tayebi sough A.

ABSTRACT: The current research has been performed due to evaluation of ties of personality traits and general health. 205 students were selected and divided into two groups. The first group included 106 students with high general health and the second group included 99 students with low general health. The test was performed using Big Five Inventory and Health Questionnaire. The results show that there is a significant difference (p < 0.05) between extraversion, openness (flexibility), agreeableness, conscientiousness and general health of students and there is a negative relationship (p < 0.05) between Neuroticism and general health of students. Neuroticism predicts 0.452 % of variance of general health.

Network Policy Making: A Necessity for Today’s Organizations

Kamel M. Alvani S.M. and Mohammadi Moghadam Y.

ABSTRACT: The highly changeable and inconstant condition of organizational environments, including public and private organizations, has led to the necessity of comprehensive planning and managing network structure in making strategic decisions. This article examines the importance of policy making in the network structure and attempts to explain how the interaction of its parts can enhance the organizational performance.

Keywords: Policy making, Decision making, Network structure.
