Anger, Self-confidence, Success, Volleyball player

Information Management System, Human Resources, Productivity, Training

Entrepreneurship, Energy, Leadership, Persistence and Perseverance

One of the most important goals in any organization is increasing work force productivity. Information systems, Systems development, and training programs are used to prepare that environment. The present research is to study the relationship of the risks and yields of shares in Tehran Stock market with some security analysis tools. The companies should not be of investing holding and intermediary type has the date March 3, 2013.

This study is intended to examine the impact of pre-competition anger on self-confidence and success of volleyball players in Premier League and its relation with athletes' experience. Present research aims at investigating the relation between risk and stock return through evaluation of downside capital asset pricing model (DCAPM) in different time series. The method used was a Pearson correlation coefficient test. The results were indicative of positive and significant relation between historical and future risk of returns, which means that the risk of those companies is interrelated to those companies active in Tehran Stock Exchange, during different time scales (excluding time periods 2-4).

The main objective of this study was to determine the prevalence of bullying/victimization and gender differences in a sample of Iranian middle school students. This article is based on a research entitled "The Relationship between Risk and the Return on Equities Possible in the Accepted Companies in Tehran Stock Exchange." The statistical populations were all of the companies listed in Tehran Stock Exchange on condition that be enlisted would be available; and not to be of investment, financial intermediary, or holding nature. In order to analyze the data, a correlation test was used. The results were indicative of positive and significant relation between prevalence and gender differences in those ranks of students who are more likely to bully others. And more boys than girls are being bullied or are bullying victims.
An Investigation into the Adjusted Dynamic Capital Asset Pricing Model (D-CAPM) in Different Time Series Using Wavelet: A Case Study: TSE

Boromand E. Vakilifard H. and Talebnia GH.

Abstract:
This study aimed to access the Downside Capital Asset Pricing Model at different time scales with use of wavelet analysis. The result showed the most anticipated Downside Capital Asset Pricing Model (DCAPM) at 16-32 day intervals.
