Forecasted earnings provide significant information for investment and other financial statements users. In recent years, several factors have been identified as affecting the accuracy of earnings forecasts. These factors include managerial variables, such as optimism and strategic behavior, and external factors, such as market conditions and industry trends. The accuracy of earnings forecasts is particularly important for investors, as it can affect stock prices and investment decisions. However, the impact of these factors on earnings forecast accuracy varies depending on the type of factor and the characteristics of the company being analyzed.

This study was performed to determine social-cultural polygamy-related factors. This is a descriptive-correlational study on 150 married couples in a city in the province of Bastak, Iran. The results showed that the respondents’ scores of polygamy components are average. Furthermore, the individuals’ responses showed that sexual beliefs are effective as a subjective factor.
