The Effects of Anger Management Skills Training on Aggression, Social Adjustment, and Mental Health of College Students

Entesar Foumany GH. and Salehi J.

ABSTRACT:
Anger is a sign that evokes aggressive behavior. Aggression can cause emotional, psychological or physical damage to individuals and society. All these improvements are attributable to reductions in their aggressive behaviors due to education.
The main purpose of this research is to identify and investigate the influence of institutional ownership on the growth opportunities and dividend policies. It is argued that there is a significant relation between institutional ownership and growth opportunities and dividend policies.

This study was performed to determine social-cultural polygamy-related factors. This is a descriptive-correlational study aimed at identifying the factors that influence polygamy in the Bastak City, Iran. The study was conducted through a questionnaire completed by 200 people. The results showed a significant relationship between the factors and polygamy.

Forecasted earnings provide significant information for investment and other financial statements users. In recent years, the accuracy of earnings forecast has been a topic of interest among researchers. This study aimed to investigate the factors affecting the accuracy of earnings forecast. The findings showed that the accuracy of earnings forecast is affected by several factors, including financial situation of companies, financial crisis, income smoothing, and auditor’s opinion. However, the continuity of activity was found to be less effective.

The current study is aimed to identify and examine the factors limiting development of virtual courses in Hormozgan University. The study found that educational factors and human factors were more effective in establishing virtual courses than financial factors.

The purpose of this research is to study the relation of the effective factors on decreasing tax assertiveness and tax diagnostic difference in the companies. The study found that tax assertiveness and tax diagnostic difference are related to the financial situation of companies, while financial crisis and auditor’s opinion variables were not affective on earning forecast accuracy.

This study aims to investigate the effect of cooperative learning on the confidence. This Study was a quasi-experimental study, and the results showed that cooperative learning increased the confidence in girls more than boys.

The present study has been carried out by aiming at a comparison between capabilities of female and male principals in primary schools. The study found that female principals had higher administrative skills than male principals.

This study was aimed to identify and examine the family internal factors, Internet addiction, and Adolescent girls. The study found that the family internal factors were the most effective factors in the tendency to Internet addiction.
