Study of Rumination and Locus of Control Roles in Depression of Female Employees of the University of Medical Sciences, Rasht, Iran

Original Research, C51

Mohammadi K., Zarei E., Chaleshgar M.

ABSTRACT: Depression is a phenomenon that is considered one of the most complicated issues of mental health in today's world. Some studies have shown that rumination has a positive and significant relationship with depression. Moreover, most researchers have shown that one’s locus of control has a significant impact on one’s depression. The purpose of this study was to investigate the role of rumination and locus of control in the depression of female employees of the University of Medical Sciences, Rasht. A subsample of 300 female employees of the University of Medical Sciences, Rasht was selected by system method to participate in this study. Using the Rumination and Locus of Control Questionnaire (RLCQ), the mean of depression was calculated by the Depression Inventory (DI). The findings of this study indicated a significant relationship between rumination and depression, and also showed that there is a positive and significant relationship between rumination and external locus of control.

Key words: Rumination, Locus of control, Depression, Female employees.
