**Key words:**
Rumination, Locus of control, Depression, Female employees.
The current study is intended to investigate into the impact of Information and Communication Technology (ICT) on learning styles in students at post-test stage. Thus, it may be concluded that one can modify students' learning styles by means of ICT.

The current article has reviewed the relationship between Emotional Intelligence in teachers with educational achievement in female students at primary schools. Also results of stepwise regression showed that educational achievement is interpreted by variable of self-regulation.

The current study is generally intended to study on role of 5S system in learning enrichment of girls' high schools from teachers' view. The results demonstrated that: Shine (S3), then Sort (S1), Standardization (S4), Set (S2), and Sustain (S5) are ranked respectively as follows:

- Sunshade Management in organizations. This study is mainly intended to give answers to some limitations in the implementation of Sunshade Management in organizations rather than removing the aforesaid limitations.

- School leaders across the world are exploring ways to better train students and develop school performance. In this study, the implementation of the Balanced Scorecard (BSC) was focused on. The results showed that the BSC could be a powerful tool for evaluating the implementation of SBM in educational organizations.

- The present essay has studied on the relationship among students' educational creativity and their educational self-actualization. The results showed that educational self-actualization is interpreted by variables of fluidity, elaboration, originality, and flexibility.

- The purpose of the present research was the reviewing of the barriers transfer and the knowledge sharing in Iran Tractor Company. The results showed that knowledge sharing and knowledge transfer were improved by implementing SBM policies and SBM policies.

- The present study is prepared by aiming at investigation into the relationship among Quality of Working Life (QWL) and job satisfaction in members of academic fellowship from Islamic Azad University. The results showed that the relationship between QWL and job satisfaction is significant.
The purpose of the present study was to evaluate the factor structure and validity of an Iranian translation of the Future Orientation Questionnaire. The Iranian version of the Future Orientation Questionnaire is a useful tool for assessing adolescents' future orientation.

The purpose of this study was to examine the relationship between proactive personalities, organizational culture, conscientiousness, perceived supervisor support, and proactive behavior. The results of Regression analysis showed that predictive variables determine around 63 percent of criterion variable.

The main purpose of this study was to investigate the relationship between quality of work life and job satisfaction of gas refinery workers. The results indicate that if the quality of life improves, the job satisfaction will also increase.

Mixed methods are the third paradigm of educational research. Both quantitative and qualitative approaches are considered as essential in educational research. Mixed methods are able to show a significant link between educational theory and practice and also help to solve the educational problems.

This study aims to investigate the effectiveness of Ellis marriage therapy training on decreasing marital conflicts between spouses. The results obtained in this study indicated that marital conflicts between spouses decreased after training.

The current survey is a descriptive plan that has studied the relationship among Organizational Climate and entrepreneurship in teachers. Furthermore, rate of entrepreneurship in male teachers is greater than in female teachers.

The aim of this study was to examine the relationship between intellectual capital and profitability models of Huang and Pera. The study showed that both interfaces of intellectual capital are a significant positive relationship with corporate profitability.

This study was carried out to analyze the content of textbooks in pre-occupational course (secondary school) for students with intellectual disability emphasizing on attention to the skills of Gardner’s Multiple Intelligences. The study found that at the rate of attention to the teaching of Gardner’s Multiple Intelligences in various books of pre-occupational course, students with intellectual disability have difficulty understanding the content of the books.

The present study did with examining goal of entrepreneurship indexes between students of Islamic Azad university of Damghan unit. The study found that entrepreneurship indexes exist in the middle level between students of Islamic Azad university Damghan unit. Therefore, the study recommended that universities should provide more educational programs for students to increase their entrepreneurship indexes.

The purpose of this study was to compare the value orientation of high school students in vicinity 1 and their parents in the case of readiness to change. The study found that Schwartz values in the case of readiness to change, had significant differences between parents and students. The study recommended that schools should pay more attention to the value education to increase students' readiness to change.

The current study is aimed at reviewing the relationship among mathematics and some students' level variables and school level variables in mathematics achievement based on TIMSS Data 2007. The study found that with variable of students' variables, variable of school level may predict greater variance than educational performance.
Attachment Patterns as Predictors of Conduct Disorder in 9-11-Year-Old Students in Bandar Abbas City, Iran

Mahmoodi, M. Zarei, E. and Askarii, M.

Abstract:
This research was aimed at studying the relationship between attachment patterns and conduct disorder. The research was designed as a descriptive-analytical study. The research sample consisted of 120 students, selected using stratified random sampling. The research tools were the Attachment Style Questionnaire and the Conduct Disorder Questionnaire. Simple linear regression analysis was used to examine the relationship between the variables. In this study, security, anxiety, and avoidance were considered the independent variables, and conduct disorder was considered the dependent variable. Results showed that the highest prediction power was for the attachment security pattern, followed by the avoidant pattern and then the anxious pattern. The relationship between attachment security and conduct disorder was positive and significant.

Key words: Conduct Disorder, Attachment Patterns, Students

The Effectiveness of Life Skills Training on Achievement Motivation and Life Satisfaction of Students

Lak, Z. Rajabi, S. Moazedian, A. Pournikdast, S. and Sabetimani, M.

Abstract:
Since a considerable part of students' lives are spent at school, a huge contribution is made by the schools to education. The school is the most common place where students spend a large part of their lives. The purpose of this research was to study the effectiveness of life skills training on students' achievement motivation and life satisfaction. The research sample consisted of 100 students in 9th and 10th grades. The research tools were the Life Skills Training Questionnaire and the Students' Life Satisfaction Questionnaire. The research design was an experimental design. The effectiveness of life skills training on students' achievement motivation and life satisfaction was measured using simple linear regression. The results of the study showed a significant positive relationship between life skills training and achievement motivation and life satisfaction. The conclusion of the research has important implications for students regarding education and counseling services.

Keywords: Life Skills, Achievement Motivation, Life Satisfaction.
