Debate about the value of providing corrective feedback on L2 Writing has been outstanding in recent years as Truscott, 1996, claims that second language writers need corrective feedback more than native speakers do. The argument stems from the concern that student writers are less aware of their own errors and need help from teachers to understand their weaknesses. The present study, however, argues that Iranian low proficiency student writers prefer the clarity of evaluative feedback which directly addresses their errors.

ABSTRACT:
The purpose of this study is to investigate the effect of corporate governance mechanism on information content of operations (unprofitable compared to profitable companies). To do so, the impact of variables such as Institutional Investors, The Non-duty Managers in the Board of Directors, Free Float Stock and The Use of Debt in Financing on Stock returns of both unprofitable and profitable companies was studied. Statistical sample includes 13 companies, between the years of 2007 to 2012. This study used the “combinational data” method in order to test considered theories. Study results show that there is a meaningful relation between nominative stockholders percent of property and stock returns in bad companies. In addition, there is also a positive relation between unbound managers in board of directors and Stock returns, which its impact is more in bad companies. Moreover, there is a meaningful relevance between floating stock and stock returns in both profitable and bad companies but it has a stronger effect on the former one. Finally, there is a negative relation between Stock returns with the proportion of debt to financial feasibility and stock yield in bad companies. However, no relation was found in profitable companies.

Keywords: Corporate Governance, Debt Financing, Institutional Investors, Non-duty Managers, Stock returns.
