The relationship between family communication patterns and Resilience with Mediating Role of Identity Schools Among Students Andimeshk High School is discussed in this research. The present research discusses earnings management of managers using restatement of income numbers to know whether numbers accounted for earnings management up to 95 percent and managers gain through restatement of income numbers. The effect of REBT on reducing depression and anxiety of women in Qom where REBT significantly reduced these variables is also examined. The present research discusses earnings management of managers using restatement of income numbers to know whether numbers accounted for earnings management up to 95 percent and managers gain through restatement of income numbers.
In the present century, commercial competitive market transforms to a competitive market between the brands. The brands spare no effort to attract consumers, including through the selection of pleasant and unpleasant odors. This study selected 384 people of clothing luxury brands consumers of Kish Island to investigate the role of pleasant and unpleasant odors in the individual and social attractiveness.

Many factors affect interpersonal attractions. According to Social psychological studies, pleasant and unpleasant odors can influence attractiveness. Pleasant odors have more influence on women, but the effects of unpleasant odors are the same for both sexes.

Growing demands in finding new strategies to maximize organizational effectiveness have resulted in development of psychological capital. Psychological capital includes resilience, hope, efficacy, and optimism. The aim of the present study was to examine the relationship between family communication patterns and Resilience. The study aimed to increase understanding of the role of family communication patterns in the development of Resilience.

Listening anxiety is a common problem in English language learning. The anxiety for EFL learners that accompanies the listening comprehension (LC) task is difficult to detect, but it can significantly affect performance. This study investigated the relationship between anxiety and listening comprehension in English. The result shows anxiety and listening comprehension in English are correlated negatively.

Happiness is a positive concept which is vital for healthiness and as a perfect satisfaction, durable and satisfactory in the difficult conditions of life. The better individuals control the conditions, the higher the sense of happiness.

The aim of this study was to investigate the relationship between the components of emotional intelligence and addiction potential of high school male students. The study aimed to provide guidelines for educators on how to prevent students from falling into the trap of addiction and how to help them become more resilient.

Job satisfaction, General Health, Ego Resiliency, Family Functioning Growing demands in finding new strategies to maximize organizational effectiveness have resulted in development of psychological capital. Psychological capital includes resilience, hope, efficacy, and optimism. The aim of the present study was to examine the relationship between family communication patterns and Resilience. ABSTRACT: Economic institutions mostly hold their assets in the cash accounts. The present study mainly aims to assess the ... flow. The results also showed that fiscal restraints are not significantly influential in cash flow sensitivity of cash.

Keywords: Asymmetric cash flow, Fiscal constraint, sensitivity of cash

ABSTRACT: The purpose of this study is to investigate the effect of corporate governance mechanism on information content of operations (unprofitable compared to profitable companies). To do so, the impact of variables such as Institutional Investors, The Non-duty Managers in the Board of Directors, Free Float Stock and The Use of Debt in Financing on Stock returns of both unprofitable and profitable companies was studied. Statistical sample includes 13 companies, between the years of 2007 to 2012. This study used the "combinational data" method to test considered theories. Study results show that there is a meaningful relation between nominative stockholders' percentage of property and stock returns in bad companies. In addition, there is also a positive relation between unbound managers in board of directors and stock returns, which its impact is more in bad companies. Moreover, there is a meaningful relevance between floating stock and stock returns in both profitable and bad companies but it has a stronger effect on the former one. Finally, there is a negative relation between the use of debt to financial feasibility and stock yield in bad companies. However, no relation was found in profitable companies.

Keywords: Corporate Governance, Debt Financing, Institutional Investors, Non-duty Managers, Stock returns.

ABSTRACT: Present study is aimed to investigate the relationship between restating financial statements and accuracy of forecasting dividends per share in pre-period of restating. Willing to restate financial statements will increase the accuracy of forecasting dividends per share in pre-period of restating.
