ABSTRACT: The purpose of the present study is to investigate the effect the Philosophy for Children program (p4c) on reducing trait anger in teens.
The present study aims to assess the relationship between information asymmetry and the cost of equity capital in listed companies. This hypothesis can be confirmed if control variables are used in the analysis.

Engagement in mathematics should be expected of all students, and the learning environment should be such that students have the requisite prior knowledge, the curriculum is relevant to them, the classroom tasks interest them, and they feel a sense of belonging.

Growing demands in finding new strategies to maximize organizational effectiveness have resulted in a greater focus on psychological capital. The relationship between psychological capital with perceived organizational support, job satisfaction, and affective commitment is of particular interest.

The goals of this study were the investigation of relationships between mathematics achievement and some contextual factors. The study showed that the school level accounts for a significant amount of variability of student mathematics achievement.

The main question in this research was the identification of core competencies in the field of elementary education in the context of Singapore's current educational system. Competencies-based curriculum in the field of primary education, regardless of the set of core competencies, will depend on the National Pedagogical Frameworks and their implementation in classrooms.

This research aims to evaluate the optimum portfolio selection using the Particle Swarm Algorithm. For this purpose, the study compared the Particle Swarm Algorithm with the Markowitz Model and Mean-Variance Model. The study found that in problems with complexity and size increases, the Particle Swarm Algorithm performs better.

The effect of Information Asymmetry on the Cost of Equity Capital in Listed Companies is a significant area of research. The study can be further extended to include a comprehensive analysis of control variables and other relevant factors.

The Current research is intended to examine the relationship among Field Dependent-Independent (FDI) cognitive styles, teaching style, and classroom atmosphere. The study found that FDI cognitive style interprets 8.8% of the variance in students' academic performance.

The Effects of Cooperative Education on the Social Intelligence of Primary School Students Looking at Social Reconstruction Approach is an important area of research. The study suggests that cooperative education can improve social intelligence in primary school students.
