Measures Taken by Iran to Prevent Transnational Organized Crimes and its Estimated Position Compared to the UN Criminal Policy

ABSTRACT:
Transnational Organized crimes are being considered as one of the most important problems of the 21st century. These crimes are the result of global social, economic, political, and technological interactions. Iran is a country that has its share of this global problem. Many measures have been taken by the Iranian government to combat these crimes. The purpose of this study was to evaluate the extent of implementation of these measures and its estimated position compared to the UN Criminal Policy. The research methods used in this study are literature review and quantitative analysis. The results showed that although some measures have been taken by the government of Iran against Transnational Organized Crimes and UN conventions (Palermo and Merida), no particular prevention has been done and no independent body of strategies has been designated. So, in order to exit from this situation, different prevention strategies such as pastoral and social preventions have been set each of which is discussed in the details of this study.

Tax revenues from legal entities are one of the important sources in state tax revenues. Since these entities record errors in filling out the tax form and file a tax return, the result of tax evasion is not evident. Because of the presence of large and small companies and the existence of the opportunity of tax evasion, the state tax authority must have a comprehensive tax control system and corporate governance in companies which their reputation and values have been damaged in the market and demand high penalties for tax violations.

High volume of accounting scandals in recent years has led to a loss of public trust in corporations and organizations. From the point of view of management, the main cause of these scandals is the existence of a fraud in the company. The purpose of the present study was to compare resilience, styles of coping with stress, alexithymia and fear of negative outcomes in patients suffering from multiple sclerosis. Patients were divided into three groups based on the severity of the disease: primary progressive, progressive-relapsing, and secondary progressive. The results showed that patients in the primary progressive group had the highest scores in resilience, styles of coping with stress, alexithymia, and fear of negative outcomes compared to other groups.
