Identifying the Drivers of Green Supply Chain Management in Tile Industry using Delphi Technique

ABSTRACT:

Supply chain management used to be widely understood as an integrated one-way manufacturing process, in which the raw materials flow to the finished goods, and there is no feedback from the customers. In the last few years, this concept has been developed to a two-way communication process. The organizations are paying attention to green supply chains, which is a process that makes the organization environmentally friendly. This study is aimed at identifying the drivers of green supply chain management in the tile industry of Iran. A Delphi study was conducted to determine the most important factors affecting the green supply chain management in the tile industry. The results showed that forty measurement items affect the GSCM in Tile industry. Finally these measurement items were ranked.

Key words:
